- 1. 1A. (NOTHING)
- 2. 1B.
- 3. **Vector Space.** A vector space *V* is a set that has scalar multiplication and vector addition defined on it with the following properties:
 - (a) Additive commutativity.
 - (b) Additive associativity of vectors (u + (v + w) = (u + v) + w) and multiplicative associativity for scalars ((ab)v = a(bv)).
 - (c) Additive identity.
 - (d) Additive inverses.
 - (e) Multiplicative identity
 - (f) BOTH distributive properties.
- 4. V-space (unique additive identity) A vector space has a unique additive identity.
- 5. V-space (unique additive inverses) Every element in a vector space has a unique additive inverse.
- 6. 1C.
- Subspace. A subset U ⊆ V is a subspace of V if it is a vector space with the same additive identity, scalar
 multiplication, and vector addition as defined on V.
- 8. Conditions for a Subspace. A subset $U \subseteq V$ is a subspace of V iff U is closed under vector addition, scalar multiplication, and contains the "zero" element as in V.
- 9. Sums of Subspaces. Let V_1, \ldots, V_n be subspaces of V. Then, we have the sum of subspaces as $V_1 + \cdots + V_n = \{v_1 + \cdots + v_n \mid v_i \in V_i \text{ for all } i\}$.
- 10. Smallest subspace containing each subspace Suppose V_1, \dots, V_n are subspaces of V. Then, $V_1 + \dots + V_n$ is the smallest subspace of V containing V_1, \dots, V_n .
- 11. **Direct Sum.** Suppose V_1, \ldots, V_m are subspaces of V. Then:
 - (a) The sum $V_1 + \cdots + V_m$ is direct if each element of $V_1 + \cdots + V_m$ can be written uniquely as a sum $v_1 + \cdots + v_m$, where $v_i \in V_i$ for all i.
 - (b) If $V_1 + \cdots + V_m$ is a direct sum, then we write $V_1 \oplus \cdots \oplus V_m$.
- 12. Conditions for a direct sum. Suppose V_1,\ldots,V_n are subspaces of V. Then, $V_1+\cdots+V_n$ is direct iff the only way to write 0 from $v_1+\cdots+v_n$ is by taking $v_i=0$ for all i.
- 13. **Direct sum of subspaces.** If U, W are subspaces of V, then U + W is direct iff $U \cap W = \{0\}$.
- 14. 2A.
- 15. Span is the smallest containing subspace. The span of a list of vectors in V is the smallest subspace containing all of the vectors in the list.
- 16. **Zero polynomial.** The zero polynomial is said to have degree $-\infty$.
- 17. **Linear Independence.** A list of vectors $v_1, \dots, v_n \in V$ is said to be linearly independent if $a_1v_1 + \dots + a_nv_n = 0$ implies $a_i = 0$ for all i. Also, the empty list () is said to be linearly independent.
- Linear Dependence. A list of vectors v₁,...,v_n is said to be linearly dependent if a₁v₁ + ··· + a_nv₌0 impies a_i ≠ 0 for some i.
- 19. **Linear Dependence Lemma.** Suppose v_1, \ldots, v_m is a linearly dependent list in V. Then, there exists $k \in \{1, \ldots, m\}$ such that $v_k \in \operatorname{span}(v_1, \ldots, v_{k-1})$. Furthermore, if k satisfies the condition in the previous sentence and the k^{th} term is removed from v_1, \ldots, v_m , then the span of the remaining list equals $\operatorname{span}(v_1, \ldots, v_m)$.
- length of linearly independent list; length of spanning list. In a finite-dimensional vector space, the length of every linearly independent list is at most the length of every spanning list of vectors.
- 21. Finite Dimensional subspaces. Every subspace of a finite-dimensional vector space is finite dimensional.
- 22. 2B.
- 23. **Basis.** A basis of V is a list of vectors that is linearly independent and spans V.
- 24. **Criterion for basis.** A list of vectors $v_1, \ldots, v_n \in V$ is a basis of V iff every $v \in V$ can be written uniquely in the form $v = a_1v_1 + \cdots + a_nv_n$, where $a_i \in F$ for all i.
- 25. Every spanning list contains a basis. Every spanning list in a vector space can be reduced to a basis of the vector space.
- 26. Basis of finite-dimensional vector space. Every finite-dimensional vector space has a basis.
- 27. Every linearly independent list extends to a basis. Every linearly independent list in a finite-dimensional vector space can be extended to a basis of the vector space.
- 28. **Every subspace of** V **is part of a direct sum equal to** V**.** Suppose V is finite-dimensional and U is a subspace of V. Then, there is a subspace W of V such that $V = U \oplus W$.
- 29. 2C.
- Basis length does not depend on basis. Any two bases of a finite-dimensional vector space have the same length.
- 31. **Dimension of a subspace.** If V is finite-dimensional and U is a subspace of V, then $\dim U \leq \dim V$.

- 32. **Linearly independent list of the right length is a basis.** Suppose *V* is finite-dimensional. Then, every linearly independent list of vectors in *V* (with list length equal to dim *V*) is a basis of *V*.
- 33. **Subspace of full dimension equals the whole space.** Suppose V is finite-dimensional and U is a subspace of V such that $\dim U = \dim V$. Then, U = V.
- 34. Spanning list of the right length is a basis. Suppose V is finite-dimensional. Then, every spanning list of V of length dim V is a basis of V.
- 35. Dimension of a sum. If V_1, V_2 are subspaces of a finite-dimensional vector space, then $\dim(V_1 + V_2) = \dim V_1 + \dim V_2 \dim(V_1 \cap V_2)$.
- 36. 3A.
- 37. **Set of Linear Maps.** The linear of linear maps from $V \to W$ is written $\mathcal{L}(V,W)$ and the set of linear maps from $V \to V$ is written $\mathcal{L}(V)$.
- 38. **Linear Map lemma.** Suppose v_1, \ldots, v_n is a basis of V and $w_1, \ldots, w_n \in W$. Then, there exists a unique linear map $T: V \to W$ such that $Tv_k = w_k$ for each k.
- 39. **Linear maps take 0 to 0.** Suppose $T: V \to W$ is a linear map. Then, T(0) = 0.
- 40. 3B.
- 41. **null space is a subspace.** Suppose $T \in \mathcal{L}(V, W)$. Then, T is a subspace of V.
- 42. **injectivity iff null is 0.** Let $T \in \mathcal{L}(V, W)$. Then, T is 1-1 iff nul $T = \{0\}$.
- 43. **range is a subspace.** If $T \in \mathcal{L}(V, W)$, then range T is a subspace of W.
- 44. Fundamental Theorem of Linear Maps. Suppose V is finite-dimensional and T ∈ ℒ(V, W). Then, range T is finite dimensional and dimV = dim nul T + dim rangeT.
- 45. linear map to a lower-dim space is not 1-1. Suppose V, W are finite-dimensional vector spaces such that dimV > dimW. Then, no linear map from V → W is 1-1.
- 46. **linear map to a higher-dim space is not onto.** Suppose V,W are finite-dimensional vector spaces such that dim $V < \dim W$. Then, no linear map from $V \to W$ is onto.
- 47 3C
- 48. **Prop.** ST = I iff TS = I (on vector spaces of the same domain).
- 49. **Prop.** Let V, W be finite-dimensional with $\dim W = \dim V$. Let $S \in \mathcal{L}(W, V)$, $T \in \mathcal{L}(V, W)$. Then, ST = I iff TS = I.
- 50. 3D.
- Theorem. Let V,W be finite-dimensional vector spaces such that dimV = dimW and let T ∈ L(V,W).
 Then. T is invertible iff T is 1-1 iff T is onto.
- 52. **isomorphism.** An isomorphism is an invertible linear map.
- dimension and isomorphic. Two finite-dimensional vector spaces are isomorphic iff they have the same dimension.
- 54. **Theorem.** Suppose V and W are finite-dimensional. Then, $\mathcal{L}(V,W)$ is finite-dimensional and $\dim \mathcal{L}(V,W) = (\dim V)(\dim W)$.
- 55. ST=I iff TS=I (on vector spaces of the same dimension). Suppose V and W are finite-dimensional vector spaces of the same dimension, S ∈ L(W,V), T ∈ L(V,W). Then ST = I iff TS = I.
- 56. **matrix of identity operator with respect to two bases.** Suppose u_1, \ldots, u_n and v_1, \ldots, v_n are two bases of V. Then, the matrices $\mathcal{M}(I; u_1, \ldots, u_n; v_1, \ldots, v_n)$ and $\mathcal{M}(I; v_1, \ldots, v_n; u_1, \ldots, u_n)$ are invertible and are inverses of each other.
- 57. **Change of basis formula.** Let $T \in \mathcal{L}(V, W)$. Suppose u_1, \ldots, u_n and v_1, \ldots, v_n are two bases of V. Let $A = \mathcal{M}(T; u_1, \ldots, u_n)$ and $B = \mathcal{M}(T; v_1, \ldots, v_n)$ and $C = \mathcal{M}(I; u_1, \ldots, u_n; v_1, \ldots, v_n)$. Then, $A = C^{-1}BC$.
- 58. Suppose that v_1, \dots, v_n is a basis of V and $T \in \mathcal{L}(V)$ is invertible. Then, $\mathcal{M}(T^{-1}) = (\mathcal{M}(T))^{-1}$, where both matrices are with respect to the basis v_1, \dots, v_n .
- 59. 3E.
- 60. **Product of vector spaces is a vector space.** Suppose $V_1, ..., V_m$ are vector spaces over \mathbb{F} . Then, $V_1 \times \cdots \times V_m$ is a vector space over \mathbb{F} .
- 61. **dimension of a product is the sum of the dimensions.** Suppose V_1, \dots, V_m are finite-dimensional vector spaces. Then, $V_1 \times \dots \times V_m$ is finite-dimensional and $\dim(V_1 \times \dots \times V_m) = \dim V_1 + \dots + \dim V_m$.
- 62. **Products and direct sums.** Suppose V_1, \dots, V_m are subspaces of V. Define a linear map $\Gamma: (V_1 \times \dots \times V_m) \to (V_1 + \dots + V_m)$ by $\Gamma(v_1, \dots, v_m) = v_1 + \dots + v_m$. Then, $V_1 + \dots + V_m$ is direct iff Γ is 1-1.
- 63. **direct sum iff dimensions add up.** Suppose V is finite-dimensional and V_1, \ldots, V_m are subspaces of V. Then, $V_1 + \cdots + V_m$ is direct iff $\dim(V_1 + \cdots + V_m) = \dim V_1 + \cdots + \dim V_m$.
- 64. $\mathbf{v} + \mathbf{U}$. Suppose $v \in V$ and $U \subseteq V$. Then, $v + U = \{v + u \mid u \in U\}$.
- 65. **Translate.** For $v \in V$ and $U \subseteq V$, the set v + U is called a translate of U.
- 6. Quotient Space. Let U be a subspace of V. Then, the quotient space V/U is the set of all translates of U, that is, $V/U = \{v + U \mid v \in V\}$.
- 67. **two translates of a subspace are either equal or disjoint.** Suppose U is a subspace of V and $v,w \in V$. Then, $v-w \in U$ iff v+U=w+U iff $(v+U)\cap (w+U)\neq \emptyset$.

- 68. Addition and scalar multiplication on Quotient space. Let U be a subspace of V. Then, we have (for all v, w ∈ V, λ ∈ F):
 - (a) addition on V/U: (v+U) + (w+U) = (v+w) + U.
 - (b) scalar multiplication on V/U: $\lambda(v+U) = (\lambda v) + U$.
- 69. **quotient space is a vector space.** Let U be a subspace of V. Then, the quotient space V/U is a subspace of V under the defined scalar multiplication and vector addition.
- 70. **quotient map.** Let U be a subspace of V. Then, the quotient map $\pi: V \to V/U$ is the linear map defined by $\pi(v) = v + U$ for each $v \in V$.
- 71. **dimension of quotient space.** Suppose V is finite-dimensional and U is a subspace of V. Then, $\dim(V/U) = \dim V \dim U$.
- 72. Column rank. The column rank (rank of the column span of a matrix) is rank T_A .
- 73. **Theorem.** If A is a rectangular matrix of elements in a field F, then row rank A = column rank A.
- 74. 3F.
- 75. **Linear functional.** A linear functional on *V* is a linear map $\phi: V \to F$.
- 76. dual space. The dual space of V is $V' = \mathcal{L}(V, F)$.
- 77. **dim space = dim dual space.** Suppose V is finite-dimensional. Then V' is also finite-dimensional and $\dim V = \dim V'$.
- 78. **dual basis.** If v_1, \ldots, v_n is a basis of V, then the dual basis of v_1, \ldots, v_n is ϕ_1, \ldots, ϕ_n (elements of V') where $\phi_j(v_k) = 1$ if k = j and $\phi_j(v_k) = 0$ if $k \neq j$.
- 79. **dual basis gives coefficients for linear combination.** Suppose v_1, \ldots, v_n is a basis of V and ϕ_1, \ldots, ϕ_n is dual basis. Then $v = \phi_1(v)v_1 + \cdots + \phi_n(v)v_n$ for each $v \in V$.
- 80. **dual basis is a basis of dual space.** Suppose V is finite-dimensional. Then the dual basis of V is a basis of V'
- 81. **dual map,** T'. Suppose $T \in \mathcal{L}(V, W)$. The dual map of T is $T' \in \mathcal{L}(W', V')$ defined for each $\phi \in W'$ by $T'(\phi) = \phi \circ T$.
- 82. algebraic properties of dual maps. we have (S+T)' = S' + T', $(\lambda S)' = \lambda S'$, (ST)' = T'S'.
- 83. **annihilator.** For $U \subseteq V$, the annihilator of U is $U_0 = \{ \phi \in V' \mid \phi(u) = 0 \forall u \in U \}$.
- 84. **annihilator is a subspace.** If $U \subseteq V$, then $U^0 \subseteq V'$.
- 85. **dimension of annihilator.** Suppose V is finite-dimensional and $U \subseteq V$. Then $\dim U^0 = \dim V \dim U$.
- 86. **condition for annihilator to equal** $\{0\}$ **or whole space.** Suppose V finite-dimensional and $U \subseteq V$. Then:
 - (a) $U^0 = \{0\}$ iff U = V.
 - (b) $U^0 = V' \text{ iff } U = \{0\}.$
- 87. **null space of** T'**.** Suppose V,W finite-dimensional and $T \in \mathcal{L}(V,W)$. Then:
 - (a) $\operatorname{nul} T' = (\operatorname{range} T)^0$.
 - (b) $\dim \operatorname{nul} T' = \dim \operatorname{nul} T + \dim W \dim V$.
- 88. T surjective equivalent to T' injective. Suppose V, W finite-dimensional and $T \in \mathcal{L}(V, W)$. Then T onto iff T' 1-1.
- 89. **range of** T'. Suppose V,W finite-dim and $T \in \mathcal{L}(V,W)$. Then:
 - (a) $\dim \operatorname{range} T' = \dim \operatorname{range} T$.
 - (b) range $T' = (\operatorname{nul} T)^0$.
- 90. *T* injective is equivalent to T' surjective. Suppose V, W finite-dim and $T \in \mathcal{L}(V, W)$. Then T 1-1 iff T' onto
- 91. **matrix of** T' **is transpose of** T**.** Suppose V,W finite-dim and $T \in \mathcal{L}(V,W)$. Then $\mathcal{M}(T') = (\mathcal{M}(T))^t$.
- 92. Ch 4. (NOTHING).
- 93. 5A
- 94. **Invariant subspace.** Suppose $T \in \mathcal{L}(V)$. A subspace $U \subseteq V$ is invariant under T if $Tu \in U$ for all $u \in U$.
- 95. **Eigenvalue, eigenvector.** Let $T \in \mathcal{L}(V)$. Then $\lambda \in F$ is an eigenvalue of T iff there exists $v \in V$ such that $Tv = \lambda v$ (with $v \neq 0$), where v is eigenvector.
- 96. equivalent conditions to be an eigenvalue. Let V be finite-dim and $T \in \mathcal{L}(V)$ and $\lambda \in F$. Then TFAE:
 - (a) λ is an eigenvalue of T.
 - (b) $T \lambda I$ not injective.
 - (c) $T \lambda I$ not surjective.
 - (d) $T \lambda I$ not invertible.
- 97. **linearly independent eigenvectors.** Let $T \in \mathcal{L}(V)$. Then every list of eigenvectors of T corresponding to different eigenvalues is linearly independent.

- 98. **operator cannot have more eigenvalues than dimension of space.** Let V be finite-dim. Then each operator on V has at most dim V distinct eigenvalues.
- 99. **null space and range of** p(T) **are invariant under** T**.** Suppose $T \in \mathcal{L}(V)$ and $p \in \mathcal{P}(F)$. Then $\operatorname{nul} p(T)$ and range p(T) are invariant under T.
- 100. 5B.
- 101. existence of eigenvalues. Every operator on a finite-dim nonzero complex vector space has an eigenvalue.
- 102. existence, uniqueness, and degree of minimal polynomial. Suppose V finite-dim and let $T \in \mathscr{L}(V)$. Then there is a unique monic polynomial $p \in \mathscr{P}(F)$ of smallest degree such that p(T) = 0. Also, deg $p \le \dim V$.
- 103. **minimal polynomial.** Suppose V finite-dim and $T \in \mathcal{L}(V)$. Then the minimal polynomial of T is the unique monic polynomial $p \in \mathcal{P}(F)$ of smallest degree such that p(T) = 0.
- 104. eigenvalues are the zeros of minimal polynomial. Let V finite-dim and $T \in L(V)$. Then:
 - (a) zeros of the minimal polynomial of T are the eigenvalues of T.
 - (b) if V is a complex vector space, then minimal polynomial of T has the form $(z \lambda_1) \cdot \cdots \cdot (z \lambda_m)$. where $\lambda_1, \ldots, \lambda_m$ is a list of all eigenvalues of T, possibly with repetitions.
- 105. q(T)=0 iff q is a polynomial multiple of the minimal polynomial. Let V finite-dim and $T \in L(V)$ and $q \in P(F)$. Then q(T)=0 iff q is a polynomial multiple of the minimal polynomial.
- 106. **minimal polynomial of a restriction operator.** Let V finite-dim and $T \in L(V)$ and $U \subseteq V$ that is invariant under T. Then minimal polynomial of T is a polynomial multiple of minimal polynomial of $T \mid_{U}$.
- 107. T not invertible iff constant term of minimal polynomial of T is 0. Let V finite-dim and $T \in L(V)$. Then T is not invertible iff the constant term in the minimal polynomial of T is 0.
- 108. **even-dimensional null space.** Let $F = \mathbb{R}$ and V finite-dim and $T \in L(V)$ and $b^2 4ac < 0$. Then $\dim(T^2 + bT + cI)$ is an even number.
- 109. operators on an odd-dimensional space have eigenvalues. Every operator on an odd-dimensional vector space has an eigenvalue.
- 110. 5C.
- 111. **upper triangular.** A matrix is called upper-triangular if all entries below the main diagonal are zero.
- 112. **conditions for upper-triangular matrix.** Suppose $T \in L(V)$ and v_1, \ldots, v_n is a basis of V. Then TFAE:
 - (a) the matrix of T with respect to v_1, \dots, v_n is upper-triangular
 - (b) $\operatorname{span}(v_1, \dots, v_k)$ is invariant under T for each $k = 1, 2, \dots, n$.
 - (c) $Tv_k \in \text{span}(v_1, \dots, v_k)$ for each $k = 1, \dots, n$.
- 113. **equation satisfied by operator with upper-triangular matrix.** Suppose $T \in L(V)$ and V has a basis with respect to which T has an upper-triangular matrix with diagonal entries $\lambda_1, \ldots, \lambda_n$. Then $(T \lambda_1 I) \cdot \cdots \cdot (T \lambda_n I) = 0$.
- 114. **determination of eigenvalues from upper-triangular matrix.** Suppose $T \in L(V)$ has an upper-triangular matrix with respect to some basis of V. Then the eigenvalues of T are precisely the entries on the diagonal of that upper-triangular matrix.
- 115. **necessary and sufficient condition to have an upper-triangular matrix.** Suppose V is finite-dim and $T \in L(V)$. Then T has an upper-triangular matrix with respect to some basis of V iff the minimal polynomial of T equals $(z \lambda_1) \cdot \dots \cdot (z \lambda_n)$ for some $\lambda_i \in F$.
- 116. if $F = \mathbb{C}$, then every operator on V has an upper-triangular matrix. Suppose V is a finite-dim complex vector space and $T \in L(V)$. Then T has an upper-triangular matrix with respect to some basis of V.
- 117. 5D.
- 118. **eigenspace**, $E(\lambda, T)$. Suppose $T \in L(V)$ and $\lambda \in F$. Then the eigenspace of T corresponding to λ is $E(\lambda, T) = \text{nul}(T \lambda I) = \{v \in V \mid Tv = \lambda v\}$.
- 119. **sum of eigenspaces is a direct sum.** Suppose $T \in L(V)$ and $\lambda_1, \ldots, \lambda_m$ are the distinct eigenvalues of T. Then $\sum_i E(\lambda_i, T)$ is a direct sum and $\sum_i \dim E(\lambda_i, T) \leq \dim V$.
- 120. **conditions equivalent to diagonalizability.** Suppose V finite-dim and $T \in L(V)$. Let $\lambda_1, \ldots, \lambda_m$ denote the distinct eigenvalues of T. Then TFAE:
 - (a) T is diagonalizable.
 - (b) V has a basis consisting of eigenvectors of T.
 - (c) $V = \bigoplus_{i} E(\lambda_i, T)$
 - (d) $\dim V = \sum_{i} \dim E(\lambda_{i}, T)$.
- 121. **enough eigenvalues implies diagonalizability.** Let V be finite-dim and $T \in L(V)$ has dim V distinct eigenvalues. Then T is diagonalizable.
- 122. necessary and sufficient condition for diagonalizability. Suppose V finite-dim and T ∈ L(V). Then T diagonalizable iff the minimal polynomial of T equals (z − λ₁) · · · (z − λ_m) for some distinct λ₁, . . . , λ_i ∈ F.
- 123. **restriction of diagonalizable operator to invariant subspace.** Suppose $T \in L(V)$ and U is a T-invariant subspace of V. Then $T \mid_U$ is a diagonalizable operator on U.
- 124. 5E.
- 125. **commuting operators correspond to commuting matrices.** Suppose $S, T \in L(V)$ and v_1, \ldots, v_n is a basis of V. Then S and T commute iff $M(S, (v_1, \ldots, v_n))$ and $M(T, (v_1, \ldots, v_n))$ commute.

- 126. eigenspace is invariant under commuting operators. Suppose $S, T \in L(V)$ commute and $\lambda \in F$. Then $E(\lambda, S)$ is invariant under T.
- 127. simultaneous diagonalizability iff commutativity. Two diagonalizable operators on the same vector space have diagonal matrices with respect to the same basis iff the two operators commute.
- 128. common eigenvector for commuting operators. every pair of commuting operators on a finite-dim nonzero complex vector space has a common eigenvector.
- 129. **commuting operators are simultaneously upper-triangularizable.** Suppose V is a finite-dim nonzero complex vector space and S, T are commuting operators on V. Then there is a basis of V with respect to which both S, T have upper-triangular matrices.
- 130. eigenvalues of sum and product of commuting operators. Suppose V is a finite-dim complex vector space and S, T are commuting operators on V. Then:
 - (a) every eigenvalue of S + T is an eigenvalue of S plus an eigenvalue of T.
 - (b) every eigenvalue of ST is an eigenvalue of S times an eigenvalue of T.
- 131. 8A.
- 132. RIBET DEFS MT1.
- Endomorphism. An endomorphism is a group homomorphism from a set to itself (NOTE: does not have to be invertible.)
- 134. End V. The symbol End V is the set of all endomorphisms on V (and multiplication on End V is defined to be function composition).
- 135. **F-Module.** An F-module is a generalization of vector spaces over rings.
- 136. **Linear Map / Linear Transformation.** Let V be a vector space over a field F with $v,w \in V$. Let T be a map on V with T(v+w) = T(v) + T(w) and $T(\lambda v) = \lambda T(v)$ for all $\lambda \in F$. Then, T is called a linear map or linear transformation.
- 137. **Linear Operator.** If T is a linear transformation on a vector spaces V with $T: V \to V$, then T is linear operator on V
- 138. **Spans.** The list v_1, \ldots, v_n spans V iff $T: F^n \to V$ is onto.
- 139. Finite-dimensional. V is finite-dimensional if V is spanned by a finite list of vectors.
- 140. **Direct Sum of Subspaces.** Let X_1, \ldots, X_t be subspaces of V. Then, their direct sum, $X_1 \oplus \cdots \oplus X_t$, is given by a 1-1 linear map T, with $T: X_1 \times \cdots \times X_t \to V$.
- 141. **Complement of Subspace.** Let X, Y be subspaces of of V. Then, Y is a complementary subspace of X iff X + Y = V and $X + Y = X \oplus Y$.
- 142. Rank, Nullity. The rank of a linear map is the dimension of the range of the linear map. The nullity is the dimension of the null space of the linear map.
- 143. Null Space. The null space is the set of vectors that are mapped to 0.
- 144. Isomorphic Vector Spaces. Two vector spaces V, W are isomorphic if there exists a linear map T: V → W that is 1-1 and onto.
- 145. **Quotient Space.** Suppose U is a subspace of V. Then, the quotient space V/U is the set $V/U = \{v + U \mid v \in V\}$.
- 146. **Column Rank.** The column rank (rank of the column span of a matrix) is defined to be rank T_A .
- 147. **Conjugation.** Let A be an $n \times n$ matrix (over F) and let Q be an $n \times n$ matrix (over F). Then, the conjugation of A by Q is $Q^{-1}AQ$.
- 148. RIBET DEFS MT2.
- 149. **Dual Space.** Let V be an F-vector space. Then the dual space of V is $V' = \mathcal{L}(V, F)$ where the elements of V' are called linear functionals.
- 150. **Annihilator.** For a subspace $U \subseteq V$, we define the annihilator of U to be $U_0 = \{ \phi \in V' \mid \phi(u) = 0 \forall u \in U \}$.
- 151. **Double Dual.** Let V be a finite-dimensional vector space with dual V'. Then the double dual of V is (V')' = V'' = V. Also, $\dim V = n = \dim V' = \dim V''$.
- 152. **Eigenvector / eigenvalue.** Let $T \in \mathcal{L}(V)$. Then an eigenvector of T is a $v \in V$ ($v \neq 0$) such that $Tv = \lambda v$ ($\lambda \in F$ is called an eigenvalue), and v is an eigenvector of T.
- 153. **Eigenspace.** Let $T \in \mathcal{L}(V)$ and take λ to be an eigenvalue of T. Then, $E(\lambda, T) = \{v \in V \mid Tv = \lambda v\} \neq \emptyset$ is written as V_{λ} and is called the eigenspace of λ , which is a subspace of V.
- 154. **Invariant subspace.** E is a T-invariant subspace if $T \in \mathcal{L}(V)$ with $T(E) \subseteq E$.
- 155. textbfIdempotent. If $e = e^2$, then e is called idempotent.
- 156. **Generalized Eigenvector.** Consider a minimal polynomial $(x \lambda_1)^{e_1} \cdot \dots \cdot (x \lambda_m)^{e_m}$ on X with $(T \lambda_1 I)^{e_1} v = 0$. Then, v is called a generalized eigenvector for $\lambda = \lambda_1$.
- 157. **Characteristic polynomial.** The characteristic polynomial of $T: V \to V$ (with eigenvalues $\lambda_1, \dots, \lambda_t$) is the polynomial $\prod_{i=1}^t (x \lambda_i)^{\dim X_i}$, where $V = X_1 \oplus \dots \oplus X_t$.

- 158. **Simultaneously diagonalizable.** Operators S and T on V are simulatenously diagonalizable if there is a basis of V that consts of vectors that are eigenvectors for both S and T (i.e. there exists a basis v_1, \ldots, v_n of V so that for i, $1 \le i \le n$, there are λ_i and μ_i so that $Sv_i = \lambda_i v_i$ and $Tv_i = \mu_i v_i$).
- 159. RIBET THMS MT1.
- 160. **Lemma.** Let F be a field, $\lambda \in F$, V a vector space over F (denoted by V/F), $v \in V$. Then, if $\lambda v = 0$, then $\lambda = 0$ or v = 0.
- 161. Lemma. A vector space over a field is a module over a field.
- 162. **Theorem.** The intersection of a family of subspaces of a vector space V is a subspace of V.
- 163. **Lemma.** Let $S = \{v_1, \dots, v_t\}$. Then the subspace of all linear combinations of the elements of S is the spanS.
- 164. **Theorem.** Let $L = v_1, \dots, v_n$ be a list of vectors in a vector space V over a field F and let $T : F^n : \to V$ be linear transformation with $(\lambda_1, \dots, \lambda_n) \mapsto \lambda_1 v_1 + \dots + \lambda_n v_n$. Then, we have the following:
 - (a) L spans V iff T is onto.
 - (b) L is linearly independent iff T is 1-1 iff $\operatorname{nul} T = \{0\}$.
 - (c) L is a basis iff T is 1-1 and onto.
- 165. **Prop.** Consider $T: F^n \to V$ with $(\lambda_1, \dots, \lambda_n) \mapsto \lambda_1 \nu_1 + \dots + \lambda_n \nu_n$, so $T(e_i) = \nu_i$ for all i. Then, T is the unique linear map $F_n \to V$ that sends $e_i \mapsto \nu_i$ for all i.
- 166. **Theorem.** Every subspace X of V has complement.
- 167. Lemma. If v₁,...,v₁ is linearly dependent list, then there is an index k such that vk ∈ span(v₁,...,vk₁, vk₁,...,vt). Furthermore, the span of the list of length t − 1 gotten by removing vk from the list is the same as the span of the original list.
- 168. Prop. In a finite-dimensional vector space, the length is of every linearly independent list of vectors is less than or equal to the length of every spanning list of vectors.
- 169. Cor. Two bases of V have the same number of elements.
- 170. **Prop.** X + Y is direct iff the null space of the sum map is $\{0\}$.
- 171. Theorem. Every subspace of a finite-dimensional vector space is finite-dimensional.
- 172. Prop. Every spanning list for a vector space can be pruned down to a basis of the space.
- 173. Cor. Every finite-dimensional vector space has a basis.
- 174. Prop. In a finite-dimensional vector space, every linearly independent list can be extended to a basis of the space.
- 175. Major Theorem. Every subspace of a finite-dimensional vector space has a complement.
- 176. **Prop.** Let X, Y be subspaces of a finite-dimensional vector space V. Then:
 - (a) $\dim X + \dim Y = \dim V$
 - (b) $X \cap Y = \{0\}$

Then, $V = X \oplus Y$.

- 177. **Prop.** $\dim(X \oplus Y) = \dim X + \dim Y$.
- 178. **Prop.** If V is a finite-dimensional vector space (with $\dim V = n$), then every subspace has dimension at most n.
- 179. **Prop.** Let $\dim V = n$. Then, a linearly independent list of vectors of V with length n is a basis for V.
- 180. **Prop.** Let $\dim V = n$. Then, every spanning list for V of length n is a basis for V.
- 181. **Lemma.** The list $(x_1, 0), ..., (x_t, 0); (0, y_1), ..., (0, y_k)$ of length t + k is a basis of $X \times Y$.
- 182. Cor. $\dim(X \times Y) = \dim X + \dim Y$.
- 183. **Cor.** Let $T: V \to W$ be a linear map with $\dim V = d$. Then, $\operatorname{rank} T \leq d$.
- 184. **Rank-Nullity Theorem.** $\dim V = \operatorname{rank} V + \operatorname{nullity} V$
- 185. **Prop.** If $T: V \to W$ is 1-1, then nullity T = 0.
- 186. Cor. If $T: V \to W$ is 1-1 and onto, then $\dim V = \dim W$.
- 187. **Theorem.** The set of linear maps $V \to W$ is a vector space $L \cdot (F^n, W) \to T \longrightarrow (Te_1, \dots, Te_n) \in W^n$.
- 188. **Theorem.** $\dim(X+Y) = \dim X + \dim Y \dim(X\cap Y)$.
- 189. **Cor.** $\dim(V/X) = \dim V \dim X$.
- 190. **Theorem.** If A is a rectangular matrix with elements in a field F, then row rank A = column rank A.
- 191. **Prop.** Let $T: V \to W$ be 1-1. Then, $\dim W \ge \dim V$
- 192. **Prop.** Let $T: V \to W$ be onto. Then, $\dim V \ge \dim W$.

- 193. **Prop.** Let $T: V \to W$ and dim $V = \dim W$. Then, T 1-1 iff T onto iff T bijective iff T invertible.
- 194. RIBET THMS MT2
- 195. **Lemma.** Let V be a finite-dimensional vector space and U a subspace of V. Then, $\dim U_0 = \dim V \dim U$.
- 196. **Theorem.** Every linear functional on a subspace of V can be extended to V.
- 197. Note. Annihilator is the dual of the quotient subspace.
- 198. **Theorem.** Let $T: V \to W$ and $T': W' \to V'$. Then $\mathcal{M}(T)$ and $\mathcal{M}(T')$ are transposes of each other.
- 199. **Lemma.** U^0 has dimension $\dim V \dim U$.
- 200. **Cor.** The annihilator of U is $\{0\}$ iff U = V. The annihilator of U is V iff $U = \{0\}$.
- 201. **Prop.** If $T: V \to W$ is a linear map, then the null space of T' is the annihilator of the range of T. We have $\operatorname{ann}(\operatorname{range} T) = \{\psi: W \to F \mid \phi(Tv) = 0 \text{ for all } v \in V, T'(\psi)(v) = 0, T'\psi = 0, \phi \in \operatorname{nul}(T')\}.$
- 202. Cor. If $T:V\to W$ is a linear map between finite-dimensional F-vector spaces, then $\dim \operatorname{nul}(T')=\dim \operatorname{nul}(T)+\dim W-\dim V$.
- 203. Cor. The linear map T is onto iff T' is 1-1.
- 204. Cor. If $T: V \to W$ is a linear map between finite-dimensional vector spaces, then T' and T have equal ranks
- 205. **Cor.** We have range $T = (\text{nul } T)^0$.
- 206. **Theorem.** Let F be a finite field with q = |F|. Then, $a^q = a$ for all $a \in F$.
- 207. **Theorem.** If F is a finite field, then $|F| = p^n$ for some prime p and integer $n \ge 1$.
- 208. **Theorem.** Take an ideal I in \mathbb{Z} . Then, I is equal to either $\{0\}$ or $m\mathbb{Z}$ (where $m \in \mathbb{Z}_{>0}$).
- 209. Theorem. F[x] is a principal ideal domain; that is, it is an integral domain in which every ideal in F[x] is principal.
- 210. **Theorem.** Let $T: V \to V$, V finite-dimensional, and let $\alpha: F[x] \to \mathcal{L}(V)$, with $f \mapsto f(T)$. Also, we have $\ker \alpha$ to be the principal ideal (m(x)). Then, m(x) is the minimal polynomial of T and has degree $\leq n^2$.
- 211. Cayley-Hamilton Theorem. Let T: V → V, V finite-dimensional, and let α: F[x] → ℒ(V), with f → f(T). Also, we have ker α to be the principal ideal (m(x)), where m(x) is the minimal polynomial of T. Then, the characteristic polynomial is in ker α; that is, we can plug in the matrix for T into its characteristic polynomial and we get that it is equal to the 0-matrix.
- 212. **Prop.** For $f(x) \in F[x]$ and $\lambda \in F$, $f(\lambda) = 0$ iff f is divisible by $x \lambda$, where $x \lambda$ is an irreducible polynomial.
- 213. Cor. A polynomial of degree n can have at most n roots.
- 214. Cor. A polynomial with infinitely many roots is identically the zero polynomial.
- 215. **Lemma.** Let $f \in \mathbb{R}[x]$ be a real polynomial. If λ is a complex root of f, so is $\overline{\lambda}$, which is the complex conjugate of λ .
- 216. **Prop.** A scalar λ is an eigenvalue of $T: V \to V$ iff $T \lambda I$ is not 1-1.
- 217. **Cor.** The map $T: V \to V$ is invertible iff 0 is not an eigenvalue of T.
- 218. Key lemma. Every list of eigenvectors of T that corresponds to distinct eigenvalues of T is a linearly independent list.
- 219. **Cor.** Let $\lambda_1, \ldots, \lambda_t$ be distinct eigenvalues and take $E_i = E(\lambda_i, T) = \{v \in V \mid Tv = \lambda_i v\} \subseteq V$. Now, take $E_1 \times \cdots \times E_t$. Then there exists a summation map $E_1 \times \cdots \times E_t$ $\xrightarrow{\text{sum}} V$ with $(v_1, \ldots, v_t) \mapsto v_1 + \cdots + v_t$. Then, the sum map is 1-1.
- 220. Cor. Suppose V is finite-dimensional. Then each operator on V has at most dim V distinct eigenvalues

- 221. **Prop.** Suppose T is an operator on an F-vector space V. If $f \in F[x]$ is a polynomial satisfied by T (meaning f(T) = 0), then every eigenvalue of T on V is a root of f.
- 222. Cor. Suppose λ is an eigenvalue of operator T on a finite-dimensional F-vector space. Then λ is a root of the minimal polynomial of T.
- 223. **Prop.** Let T be an operator on a finite-dimensinoal vector space. Suppose λ is a root of the minimal polynomial. Then λ is an eigenvalue of T.
- 224. Theorem. All operators on a nonzero finite-dimensional vector space over an algebraically closed field have at least one eigenvalue.
- 225. **Prop.** Assume that $F = \mathbb{R}$ and that $f(x) := x^2 + bx + c$ is an irreducible polynomial. If $T \in \mathcal{L}(V)$ and V is finite-dimensional, then the null space of f(T) is even-dimensional.
- 226. **Prop (honors version).** Let T be an operator on a finite-dimensional vector space over F. If p is an irreducible polynomial over F, then the dimension of the null space of p(T) is a multiple of the degree of p.
- 227. **Prop.** F[x]/(p) (where p is irreducible) is a field.
- 228. **Formula.** $\dim_F V = [K:F] \cdot \dim_K V = \dim_F K \cdot \dim_K V$.
- 229. Cor. Every operator on an odd-dimensional R-vector space has an eigenvalue.
- 230. **Prop.** If T is an operator on a finite-dimensional F-vector space, then the minimal polynomial of T has degree at most dim V.
- 231. **Prop.** If T is upper-triangular with respect to some basis of V, and if the diagonal entries of an upper-triangular matrix representation of T are $\lambda_1, \ldots, \lambda_n$, then $(T \lambda_1 I) \cdots (T \lambda_n I) = 0$.
- 232. **Prop.** Let V be a finite-dimensional vector space and $T \in \mathcal{L}(V)$ and let $\lambda_1, \dots, \lambda_m$ be the eigenvalues of T. Then, $V = \oplus E(\lambda_i, T)$ iff T is diagonalizable.
- 233. Prop. TFAE.
 - (a) T is diagonalizable.
 - (b) V has a basis consisting of eigenvectors
 - (c) The direct sum $\bigoplus V_{\lambda_i}$ is all of V.

(d)
$$\dim \left(\bigoplus_{i} V_{\lambda_i} \right) = \dim V$$
.

- 234. **Prop.** If $T: V \to V$ has dim V different eigenvalues, then T is diagonalizable.
- 235. **Prop.** The operator $T: V \to V$ is diagonalizable iff its minimal polynomial splits completely as a product of distinct linear factors of the form x r.
- 236. **Jordan Canonical Form.** X can be written as a direct sum of Jordan blocks, where $\sum \dim(\text{block}) = \dim X$.
- 237. **Lemma.** Let $X = \oplus \operatorname{span}(U_i v)$ for $i \in \{0, \dots, k_1\}$. If Z is a subspace of X' that is U'-invariant, then $\operatorname{ann}(Z) =: Y$ is U-invariant.
- 238. **Lemma.** Suppose S and T are commuting operators on V. If λ is an eigenvalue for T on V, then the eigenspace $E(\lambda,T)$ is S-invariant.
- 239. Theorem. The diagonalize operators on the same finite-dimensional vector space are simulateneously diagonalizable iff they commute with each other.
- 240. Theorem. Every pair of commuting operators on a finite-dimensional nonzero complex vector speae has a common eigenvector.
- 241. Prop. Two commuting operators on a finite-dimensional nonzero complex vector space can be simultaneously upper-triangularized.
- 242. **Prop.** We have:
 - (a) Every eigenvalue of S + T is the sum of an eigenvalue of S and an eigenvalue of T.
 - (b) Every eigenvalue of ST is the product of an eigenvalue of S and an eigenvalue of T.
